

High Leg 2 Fold Sofa Sleeper Mechanism

The high leg 2 fold sofa sleeper mechanism uses high-quality rivets, oil riveting process and metal washer technology. There is almost no gap between the joints, but the work is very stable to ensure the stability of the sleepers. LINKREST hope to help you better understand high leg 2 fold sofa sleeper mechanism. Welcome new and old customers to continue to cooperate with us to create a better future together!

Product Description

Bi Fold Sofa Sleeper Mechanisms

LINKREST is one of the leading **High Leg 2 Fold Sofa Sleeper Mechanism** manufacturers and suppliers in China. Our future is dependent on our passion for more value added and brand new designing, high quality products and professional service while meeting our financial objectives. We have been investing in R&D, automatic production lines, and finding the best solution to reduce the cost and lead time for customer satisfaction. Raw material and transportation cost are on the rise, we have dedicated ourselves on finding technical solutions like our DIY mechanisms and redesigned construction to ensure customer satisfaction.

High Leg 2 Fold Sofa Sleeper Mechanism Features & Benefits:

1. Real High-leg version with robot machine can go inside freely.
2. Patented partly assembled design for large container loading quantity but very easy to put together.
3. Wood frame is interchangeable with low leg but wooden leg height is different.
4. Option for air breath and fire-proof new deck to get better sitting and sleeping.
5. 2600N has no bar feeling for comfort sleeping.
6. Use high quality rivets and oil riveting process with metal washer technology, joints almost have no clearance but work very smooth for the stability of the sleeper.
7. Use stronger and thicker tubular steel to secure the loading capacity.
8. The sleeper opens flat to reduce the height difference between heart and foot for the comfort.

9. The folded mattress in headrest changed to be away from the back post to protect mattress from friction in close position.

10. Use high density foam or coils for the seat cushion to reduce the seat height from the floor, and L-shaped seat cushion is recommended.
